

Students' report Group 14 on E-learning and Flipped Classroom Activities (IO4)

Student's name and surname: Tadas Aržuolaitis, Ignas Narbutas

Class: 10B

Institute: Domeikavos Gimnazija

Country: Lithuania

Specific in-depth topic of own home study and why this topic has been chosen (at least 200 characters)

The specific in-depth topic that has been chosen was changing lightbulbs to LEDs in our houses. LED lights can last 25 times longer and are more durable. But the most important thing is that they use 75% percent less energy than other bulbs, which in turn preserves the environment.

Comment about the activity done at home (at least 300 characters)

The activity was unchallenging to do. All we had to accomplish was to buy the LEDs and install them. Most stores specializing in home interior sell them, so it wasn't hard to come by. Installing them was the complicated part because we had to the lights all around the house, but with enough hard work, we got it done.

Comment about the interactive activity in the classroom (at least 400 characters)

The interactive activity in the classroom was very informative. It helped me understand the importance of soil and sustainability and why we should put our attention to protecting soil and the world around us. The activity was also fun and enjoyable, it didn't get monotonous or redundant. Everyone's presentations were unique, even with the same topic. I liked listening to their jobs and what they had to say about soil and sustainability.
