

Students' report Group 1 on E-learning and Flipped Classroom Activities (IO4)

Student's name and surname: Ema Grigonytė, Aidas Zdanavičius & Aidas Rybelis

Class: 10cg

Institute: Domeikavos Gymnasium

Country: Lithuania

Specific in-depth topic of own home study and why this topic has been chosen (at least 200 characters)

The main topic of our own home study was soil. Soil degradation and soil erosion were also included. This topic was chosen because it seemed relevant to know what actions affect the soil. Especially the causes and effects of soil erosion. Some of the causes include climate change, controlled burning of wildfires, and overgrazing.

Comment about the activity done at home (at least 300 characters)

At home, we gathered information about soil from Cielo and Google. We searched for diagrams that were easy to understand so they could be included in our presentation. We read through the articles and chose facts that seemed most important to us. Having the opportunity to do the project together outside of school helped us distribute the work evenly.

Comment about the interactive activity in the classroom (at least 400 characters)

In the classroom, we presented our project. The diagrams we included seemed to catch people's attention and help them understand what we were talking about. The best option to check if our classmates remembered some of our stated facts, was to make a Kahoot. We were pleased to see that most asked questions were answered correctly, which means that they listened to our presentation. Even if they answered a question wrong, seeing the right answer, it'll help them remember the fact in the future, since we learn from our mistakes.
