

Students' report Group 2

on E-learning and Flipped Classroom Activities (IO4)

Student's name and surname: Dovile Daubaraite, Gabriele Ramonaite

Class: IIag

Institute: Domeikavos gimnazija

Country: Lithuania

Specific in-depth topic of own home study and why this topic has been chosen (at least 200 characters)

We chose water pollution and made a Kahoot! Water pollution is a big problem and we wanted to address it in the most classroom friendly way. Our water is very polluted and we should bring more attention to this problem and try to prevent it and make people care more about the environment and the ecosystems that are suffering because of us.

Comment about the activity done at home (at least 300 characters)

We made a presentation about pollution in our water. The main information in our presentation came from a video from National geographic called "How we can keep plastics out of our ocean". It informs us about the pollution in our ocean and educates us about preventing it. The next thing we did was make a Kahoot! We thought of questions as a group and we mostly used information from the video and our own knowledge so the people answering would not struggle.

Comment about the interactive activity in the classroom (at least 400 characters)

The interactive activity in class was highly informative we presented it very nicely and everybody listened to it. In class people thought it was brilliant, we informed many classmates and everyone agreed that is our chosen topic is urgent. The activity in general was incredibly fun and delightful. It not only taught the students something new but also it taught the people making the presentations.

Overall, the activity taught something new to everyone in class and not only was informative, but it was also fun and brilliant. We are extremely glad that we decided to take part in this project.
