

Students' report Group 4 on E-learning and Flipped Classroom Activities (IO4)

Student's name and surname: Emilija Purlytė; Emily Rasa Malcolms.

Class: IIbg

Institute: Domeikavos gimnazija

Country: Lithuania

Specific in-depth topic of own home study and why this topic has been chosen (at least 200 characters)

Water, an organism for all organisms. Being reliable on it brings us a lot of knowledge about it. Discovering everything about it gives us hope for our future, and how we can improve it. The older generation has a job, to teach us about our nature, and planet, and we, the future, will learn and advance everything we can. Understanding the importance of water, we chose the topic because we wanted to deepen our knowledge on it and apply it in the future.

Comment about the activity done at home (at least 300 characters)

Our group made the slides as smart and aesthetic as we could. Reminding everyone how important they are encouraged us to make them perfect. Our information was based on the internet, and its scientific sites. We divided our responsibilities into two, one designed them, and the other searched for Intel. At the point where we were satisfied with the work, we got to reading and repeating for the presentation. We put all the links to the site in the slides, and were reading for the class.

Comment about the interactive activity in the classroom (at least 400 characters)

Reminding ourselves that we are doing this for the better of our generation we started presenting. Talking, just communicating with our classmates made our day better. Being able to teach made us feel important. After we presented we followed it up with a quiz, just to see how they listened. Everyone was encouraged to participate in the activity and accepted our presentation favorably so it made us feel comfortable. The

quiz proved to be helpful for memorizing all this information. This experience made us appreciate everyone who tries to teach the importance of nature and its abilities.
