

## Students' report Group 5 on E-learning and Flipped Classroom Activities (IO4)

**Student's name and surname: Jurgita Zdanavičiūtė, Ieva Norvilaite**

**Class:10**

**Institute: Domeikavos gimnasium**

**Country: Lithuania**

**Specific in-depth topic of own home study and why this topic has been chosen (at least 200 characters)**

The topic we chose is water pollution. We chose this topic because water is one of the most important things needed for us to live and we think that it is very important to talk about it and teach others of the consequences of water pollution.

**Comment about the activity done at home (at least 300 characters)**

We are three friends which did it as a group project. We all talked about three topics: air pollution, water pollution and recycling. We met at a friend's house and searched for the information on the internet, and then out of all the information we selected the most useful information. With that information, we did slides and found two videos about sustainable development. In addition, to make it more interesting we thought about some questions to ask everybody after our presentation.

**Comment about the interactive activity in the classroom (at least 400 characters)**

We started when it was a break. We had to connect the projector, we had to find and turn on our slides and see if everything was right. In addition, we had to rehearse everything. Then when everyone came to the classroom, we started. First, we presented the topic air pollution, the causes and effects of it as well as possible solutions. Then we talked about water pollution and recycling. Later we showed the two videos

about sustainable development. In addition, to make it more interesting we used our questions to do a little quiz, and the student who said the right answer got a prize - a candy.
