

Students' report Group 9 on E-learning and Flipped Classroom Activities (IO4)

Student's name and surname: Lukas Komparskas, Dziugas Bauzys

Class: 10gc

Institute: Domeikavos gymnasium

Country: Lithuania

Specific in-depth topic of own home study and why this topic has been chosen (at least 200 characters)

We chose the topic of pollution because it is a big problem in the world. A lot of forests are polluted with trash and plastic. It is a huge problem because animals eat that trash and can die because of it. However, many people do not understand how serious the situation is. We chose the topic to make our classmates aware of the problem.

Comment about the activity done at home (at least 300 characters)

To reduce pollution, at home we recycle trash and pick up all our trash if we accidentally drop it. We have containers for general waste and for boxes and packaging. It seems that what we do at home may not be a huge change but if everyone did that the pollution would be way, lower and we would have less plastic in the forests, oceans etc. We prepared a presentation based on the things that we do at home and introduced the ideas to our classmates. Of course, we added some statistics to make our presentation more convincing.

Comment about the interactive activity in the classroom (at least 400 characters)

In our classroom, we did an interactive activity about the problem. We had to present our selected world problem. All our classmates seemed to be very interested in the presentation and even asked a few questions afterward. Then the classmates had to answer our questions from the quiz- a kahoot that we had

prepared at home. This part also was very enjoyable and checked the classmate's understanding of the topic.
