

Student's Personal report on E-learning and Flipped Classroom Activities (IO4)

Student's name and surname: Judita Davydovaitė

Class: IIcg(10 grade)

Institute: Domeikava gimnazium

Country: Lithuania

Specific in-depth topic of own home study and why this topic has been chosen (at least 200 characters)

I chose water pollution because it is the most common problem in the world and this problem can be solved much easier than other global climate issues, as well as water pollution is rapidly being reduced and more and more organizations are being created that collect harmful waste from water bodies, rivers, oceans.

Comment about the activity done at home (at least 300 characters)

At home, my family and I try to save as much water as possible so that we would waste it less; also, we try to clean the environment around us so that the waste does not harm the underground water bodies that we use as sources of drinking water. In preparing my presentation I included my previous experience and practice and also included relevant slides as well as the theory that I analyzed while preparing the presentation.

Comment about the interactive activity in the classroom (at least 400 characters)

In class, we often exchange ideas about what we have learned or what ideas we have that could help solve these problems in our immediate environment. If this can be done within small budget, in agreement with the school management, this can be done. So, to test my classmates' understanding I also prepared a

questionnaire and my classmates had to answer the questions. I was glad to see that everyone was very enthusiastic about participating the quiz and answering the questions.
