

## INTERVIEW WITH STUDENTS

**Topic:** Is water pollution the biggest pollution to the humankind?

1. Opposing team:

Was it hard to prepare arguments?

- It was a bit hard considering, that water pollution is a big problem, but we knew about other types of pollutions, so it wasn't hard to find examples of other threats to humans.

What do you do to prevent pollution?

- My family and me always recycle and whenever we can, we chose the ecofriendly version of the thing we obtain.

Which of the problems discussed in these days has interested you the most?

- I was really interested in the first topic, when we were talking how sustainability can affect humankind, because I think we don't talk about that enough.

- Anja

Vicković., V. gimnazija, Croatia

2. Proposing team:

What does water pollution mean to you?

- To me water pollution means, that there is a lot of garbage in the water that is spreading diseases through water and it comes to our houses through the pipes.

Do you fully agree with the side you are on?

- I agree with the side I'm on. I agree, because in the end everything is connected to the water.

Was it hard to prepare arguments?

- It was easy, because we know a lot about water pollution and since I agree with the side I was on, I found it easy to articulate my debate.

Which of the problems discussed in these days has interested you the most?

- I think the first one was the most interesting, because both sides made really good points and I didn't know a lot of things they said, so I learned more.

- Francesca Greco, Industriale

'Guido Donegani' , Italy
